

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

STEVEN MADSEN and DIANA
MADSEN, Husband and Wife,

No.

Plaintiff,

COMPLAINT FOR DAMAGES

V.

JURY DEMAND

MONSANTO COMPANY,

Defendants.

COMES NOW Plaintiffs, Steven Madsen and Diana Madsen, husband and wife, through their attorneys of record, Schroeter, Goldmark & Bender, PS, and Sims Weymuller and Elizabeth McLafferty, for causes of action against the above-named Defendant, and hereby allege as follows:

I. PARTIES

Plaintiff

1.1. Plaintiffs reside in Black Diamond, Washington. On information and belief, plaintiff Steven Madsen was exposed to Roundup® containing the active ingredient glyphosate and the surfactant polyethoxylated tallow amine (“POEA”) in Washington around mid-1970s to present.

1.2. As a direct and proximate result of long-term exposure to Roundup®, plaintiff Steven Madsen was diagnosed with a subtype of T cell lymphoma, anaplastic large cell lymphoma, ALK positive, non-Hodgkin's lymphoma in or around June 28, 2017.

Defendants

1.3. Defendant Monsanto Company (“Monsanto”) is a Delaware corporation with its headquarters in St. Louis, Missouri.

1.4. Defendant advertises and sells goods, specifically Roundup®, in the State of Washington.

1.5. Defendant transacted and conducted business within the State of Washington that relates to the allegations in this complaint.

1.6. Defendant derived substantial revenue from goods and products used in the State of Washington.

1.7. Defendant expected or should have expected its acts to have consequences within the State of Washington.

1.8. Defendant engaged in the business of designing, developing, manufacturing, testing, packaging, marketing, distributing, labeling, and/or selling Roundup®.

II. JURISDICTION AND VENUE

2.1. This Court has jurisdiction over Defendants and this action pursuant to 28 U.S.C. § 1332 because the amount in controversy exceeds \$75,000, exclusive of interest and costs and, because there is complete diversity of citizenship between Plaintiff and Defendant.

2.2. Venue is proper in this Court pursuant to 28 U.S.C. § 1331; at all times material, plaintiff was a resident of Washington State and Defendants at all times material transacted business in Washington selling, marketing, and/or distributing Roundup®.

III. FACTS

3.1. In 1970, Defendant Monsanto Company discovered the herbicidal properties of glyphosate and began marketing it in products in 1974 under the brand name Roundup®. Roundup® is a non-selective herbicide used to kill weeds that commonly compete with the growing of crops. By 2001, glyphosate had become the most-used active ingredient in American agriculture with 85–90 millions of pounds used annually. That number grew to 185 million pounds by 2007.¹ As of 2013, glyphosate was the world's most widely used herbicide.

3.2. Monsanto is a multinational agricultural biotechnology corporation based in St. Louis, Missouri. It is the world's leading producer of glyphosate. As of 2009, Monsanto was the world's leading producer of seeds, accounting for 27% of the world seed market.² The majority of these seeds are of the Roundup Ready[®] brand. The stated advantage of Roundup Ready[®] crops is that they substantially improve a farmer's ability to control weeds, since glyphosate can be sprayed in the fields during the growing season without harming their crops. In 2010, an estimated 70% of corn and cotton, and 90% of soybean fields in the United States were Roundup Ready[®].³

1 3.3. Monsanto's glyphosate products are registered in 130 countries and approved
 2 for use on over 100 different crops.⁴ They are ubiquitous in the environment. Numerous
 3 studies confirm that glyphosate is found in rivers, streams, and groundwater in agricultural
 4 areas where Roundup® is used.⁵ It has been found in food,⁶ in the urine of agricultural
 5 workers,⁷ and even in the urine of urban dwellers that are not in direct contact with
 6 glyphosate.⁸ On March 20, 2015, the International Agency for Research on Cancer
 7 ("IARC"), an agency of the World Health Organization ("WHO"), issued an evaluation of
 8 several herbicides, including glyphosate. That evaluation was based, in part, on studies of
 9 exposures to glyphosate in several countries around the world, and it traces the health
 10 implications from exposure to glyphosate since 2001.

12 3.4. On July 29, 2015, IARC issued the formal monograph relating to glyphosate.
 13 In that monograph, the IARC Working Group provides a thorough review of the numerous
 14 studies and data relating to glyphosate exposure in humans.

16 3.5. The IARC Working Group classified glyphosate as a Group 2A herbicide,
 17 which means that it is probably carcinogenic to humans. The IARC Working Group

 270 (2012), available at <http://www.ithaka-journal.net/druckversionen/e052012-herbicides-urine.pdf>.

1 concluded that the cancers most associated with glyphosate exposure are non-Hodgkin's
 2 lymphoma and other hematopoietic cancers, including lymphocytic lymphoma/chronic
 3 lymphocytic leukemia, B-cell lymphoma, and multiple myeloma.⁹

4 3.6. The IARC evaluation is significant. It confirms what has been believed for
 5 years: that glyphosate is toxic to humans.

6 3.7. Nevertheless, Monsanto, since it began selling Roundup®, has represented it
 7 as safe to humans and the environment. Indeed, Monsanto has repeatedly proclaimed and
 8 continues to proclaim to the world, and particularly to United States consumers, that
 9 glyphosate-based herbicides, including Roundup®, create no unreasonable risks to human
 10 health or to the environment.

12 **Registration of Herbicides under Federal Law**

13 3.8. The manufacture, formulation, and distribution of herbicides, such as
 14 Roundup®, are regulated under the Federal Insecticide, Fungicide, and Rodenticide Act
 15 (“FIFRA” or “Act”), 7 U.S.C. § 136 *et seq.* FIFRA requires that all pesticides be registered
 16 with the Environmental Protection Agency (“EPA”) prior to their distribution, sale, or use,
 17 except as described by the Act. 7 U.S.C. § 136a(a).

18 3.9. Because pesticides are toxic to plants, animals, and humans, at least to some
 19 degree, the EPA requires as part of the registration process, among other things, a variety of
 20 tests to evaluate the potential for exposure to pesticides, toxicity to people and other potential
 21 non-target organisms, and other adverse effects on the environment. Registration by the EPA,
 22 however, is not an assurance or finding of safety. The determination the EPA must make in
 23
 24

25
 26 ⁹ See Guyton et al., *Carcinogenicity of Tetrachlorvinphos, Parathion, Malathion, Diazinon & Glyphosate, supra*.

1 registering or re-registering a product is not that the product is “safe,” but rather that use of
2 the product in accordance with its label directions “will not generally cause unreasonable
3 adverse effects on the environment.” 7 U.S.C. § 136a(c)(5)(D).

4 3.10. FIFRA defines “unreasonable adverse effects on the environment” to mean
5 “any unreasonable risk to man or the environment, taking into account the economic, social,
6 and environmental costs and benefits of the use of any pesticide.” 7 U.S.C. § 136(bb). FIFRA
7 thus requires the EPA to make a risk/benefit analysis in determining whether a registration
8 should be granted or allowed to continue to be sold in commerce.

9 3.11. The EPA and the State of Washington registered Roundup® for distribution,
10 sale, and manufacture in the United States and the State of Washington.

11 3.12. FIFRA generally requires that the registrant, Monsanto in the case of
12 Roundup®, conduct the health and safety testing of pesticide products. The EPA has
13 protocols governing the conduct of tests required for registration and the laboratory practices
14 that must be followed in conducting these tests. The data produced by the registrant must be
15 submitted to the EPA for review and evaluation. The government is not required, nor is it
16 able, however, to perform the product tests that are required of the manufacturer.

17 3.13. The evaluation of each pesticide product distributed, sold, or manufactured is
18 completed at the time the product is initially registered. The data necessary for registration of
19 a pesticide has changed over time. The EPA is now in the process of re-evaluating all
20 pesticide products through a Congressionally-mandated process called “re-registration.” 7
21 U.S.C. § 136a-1. In order to reevaluate these pesticides, the EPA is demanding the
22 completion of additional tests and the submission of data for the EPA’s review and
23 evaluation.

1 3.14. In the case of glyphosate, and therefore Roundup®, the EPA had planned on
 2 releasing its preliminary risk assessment —in relation to the registration process – no later
 3 than July 2015. The EPA completed its review of glyphosate in early 2015, but it delayed
 4 releasing the risk assessment pending further review in light of the WHO's health-related
 5 findings.
 6

7 **Scientific Fraud Underlying the Marketing and Sale of Glyphosate/Roundup®**

8 3.15. Based on early studies showing that glyphosate could cause cancer in
 9 laboratory animals, the EPA originally classified glyphosate as possibly carcinogenic to
 10 humans (Group C) in 1985. After pressure from Monsanto, including contrary studies it
 11 provided to the EPA, the EPA changed its classification to evidence of non-carcinogenicity
 12 in humans (Group E) in 1991. In so classifying glyphosate, however, the EPA made clear
 13 that the designation did not mean the chemical does not cause cancer: “It should be
 14 emphasized, however, that designation of an agent in Group E is based on the available
 15 evidence at the time of evaluation and should not be interpreted as a definitive conclusion
 16 that the agent will not be a carcinogen under any circumstances.”¹⁰
 17

18 3.16. On two occasions, the EPA found that the laboratories hired by Monsanto to
 19 test the toxicity of its Roundup® products for registration purposes committed fraud.
 20

21 3.17. In the first instance, Monsanto, in seeking initial registration of Roundup® by
 22 the EPA, hired Industrial Bio-Test Laboratories (“IBT”) to perform and evaluate pesticide
 23
 24

25 ¹⁰ U.S. Envtl. Prot. Agency, *Memorandum, Subject: SECOND Peer Review of Glyphosate I* (1991), available at
 26 https://archive.org/stream/SecondPeerReviewOfGlyphosateEPAOct301991/Second%20Peer%20Review%20Of%20Glyphosate%20-%20EPA%20-%20%20Oct%2030,%201991_djvu.txt.

1 toxicology studies relating to Roundup®.¹¹ IBT performed about thirty tests on glyphosate
 2 and glyphosate-containing products, including nine of the fifteen residue studies needed to
 3 register Roundup®.

4 3.18. In 1976, the United States Food and Drug Administration (“FDA”) performed
 5 an inspection of IBT that revealed discrepancies between the raw data and the final report
 6 relating to the toxicological impacts of glyphosate. The EPA subsequently audited IBT; it too
 7 found the toxicology studies conducted for the Roundup® herbicide to be invalid.¹² An EPA
 8 reviewer stated, after finding “routine falsification of data” at IBT, that it was “hard to
 9 believe the scientific integrity of the studies when they said they took specimens of the uterus
 10 from male rabbits.”¹³

12 3.19. Three top executives of IBT were convicted of fraud in 1983.

13 3.20. In the second incident of data falsification, Monsanto hired Craven
 14 Laboratories in 1991 to perform pesticide and herbicide studies, including for Roundup®. In
 15 that same year, the owner of Craven Laboratories and three of its employees were indicted,

19

23 ¹³ Marie-Monique Robin, *The World According to Monsanto: Pollution, Corruption and the Control of the*
 24 *World’s Food Supply* (2011) (citing U.S. Envtl. Prot. Agency, *Data Validation, Memo from K. Locke,*
 25 *Toxicology Branch, to R. Taylor, Registration Branch*. Washington, D.C. (August 9, 1978)).

1 and later convicted, of fraudulent laboratory practices in the testing of pesticides and
 2 herbicides.¹⁴

3 3.21. Despite the falsity of the tests that underlie its registration, within a few years
 4 of its launch, Monsanto was marketing Roundup® in 115 countries.

5 **The Importance of Roundup® to Monsanto's Market Dominance Profits**

6 3.22. The success of Roundup® was key to Monsanto's continued reputation and
 7 dominance in the marketplace. Largely due to the success of Roundup® sales, Monsanto's
 8 agriculture division was out-performing its chemicals division's operating income, and that
 9 gap increased yearly. But with its patent for glyphosate expiring in the United States in the
 10 year 2000, Monsanto needed a strategy to maintain its Roundup® market dominance and to
 11 ward off impending competition.

12 3.23. In response, Monsanto began the development and sale of genetically
 13 engineered Roundup Ready® seeds in 1996. Since Roundup Ready® crops are resistant to
 14 glyphosate; farmers can spray Roundup® onto their fields during the growing season without
 15 harming the crop. This allowed Monsanto to expand its market for Roundup® even further;
 16 by 2000, Monsanto's biotechnology seeds were planted on more than 80 million acres
 17 worldwide and nearly 70% of American soybeans were planted from Roundup Ready® seeds.
 18 It also secured Monsanto's dominant share of the glyphosate/Roundup® market through a
 19 marketing strategy that coupled proprietary Roundup Ready® seeds with continued sales of
 20 its Roundup® herbicide.

21
 22
 23
 24
 25
 26 ¹⁴ Dr. Roger A. Novak, *The Long Arm of the Lab Laws*, (November, 2001) available at
<https://pubs.acs.org/subscribe/archive/tcaw/10/i11/html/11regs.html>.

1 3.24. Through a three-pronged strategy of increased production, decreased prices,
 2 and by coupling with Roundup Ready® seeds, Roundup® became Monsanto's most profitable
 3 product. In 2000, Roundup® accounted for almost \$2.8 billion in sales, outselling other
 4 herbicides by a margin of five to one, and accounting for close to half of Monsanto's
 5 revenue.¹⁵ Today, glyphosate remains one of the world's largest herbicides by sales volume.
 6

7 **Monsanto has known for decades that it falsely advertises the safety of Roundup®**

8 3.25. In 1996, the New York Attorney General ("NYAG") filed a lawsuit against
 9 Monsanto based on its false and misleading advertising of Roundup products. Specifically,
 10 the lawsuit challenged Monsanto's general representations that its spray-on glyphosate-based
 11 herbicides, including Roundup, were "safer **than table salt**" and "practically **non-toxic**" to
 12 mammals, birds, and fish. Among the representations the NYAG found deceptive and
 13 misleading about the human and environmental safety of Roundup are the following:
 14

- 15 a) Remember that environmentally friendly Roundup herbicide is
 biodegradable. It won't build up in the soil so you can use
 Roundup with confidence along customers' driveways, sidewalks
 and fences ...
- 17 b) And remember that Roundup is biodegradable and won't build
 up in the soil. That will give you the environmental confidence you need to
 use Roundup everywhere you've got a weed, brush, edging or trimming
 problem.
- 19 c) Roundup biodegrades into naturally occurring elements.
- 20 d) Remember that versatile Roundup herbicide stays where you put
 it. That means there's no washing or leaching to harm customers'
 shrubs or other desirable vegetation.

25

 26 ¹⁵ David Barboza, *The Power of Roundup; A Weed Killer Is A Block for Monsanto to Build On*, N.Y. Times,
 Aug. 2, 2001, available at <http://www.nytimes.com/2001/08/02/business/the-power-of-roundup-a-weed-killer-is-a-block-for-monsanto-to-build-on.html>.

e) This non-residual herbicide will not wash or leach in the soil. It ... stays where you apply it.

f) You can apply Roundup with “confidence because it will stay where you put it” it bonds tightly to soil particles, preventing leaching. Then, soon after application, soil microorganism’s biodegrade Roundup into natural products.

g) Glyphosate is less toxic to rats than table salt following acute oral ingestion.

h) Glyphosate's safety margin is much greater than required. It has over a 1,000-fold safety margin in food and over a 700-fold safety margin for workers who manufacture it or use it.

i) You can feel good about using herbicides by Monsanto. They carry a toxicity category rating of 'practically non-toxic' as it pertains to mammals, birds and fish.

j) "Roundup can be used where kids and pets will play and breaks down into natural material." This ad depicts a person with his head in the ground and a pet dog standing in an area which has been treated with Roundup®.¹⁶

3.26. On November 19, 1996, Monsanto entered into an Assurance of Discontinuance with NYAG, in which Monsanto agreed, among other things, “to cease and desist from publishing or broadcasting any advertisements [in New York] that represent, directly or by implication” that:

a) its glyphosate-containing pesticide products or any component thereof are safe, non-toxic, harmless or free from risk.

b) its glyphosate-containing pesticide products or any component thereof manufactured, formulated, distributed or sold by Monsanto are biodegradable.

c) its glyphosate-containing pesticide products or any component thereof stay where they are applied under all circumstances and will not move through the environment by any means.

¹⁶ Attorney General of the State of New York, in the Matter of Monsanto Company, Assurance of Discontinuance Pursuant to Executive Law § 63(15) (Nov. 1996).

d) its glyphosate-containing pesticide products or any component thereof are "good" for the environment or are "known for their environmental characteristics."

e) glyphosate-containing pesticide products or any component thereof are safer or less toxic than common consumer products other than herbicides.

f) its glyphosate-containing products or any component thereof might be classified as "practically non-toxic."

3.27. Monsanto did not alter its advertising in the same manner in any state other than New York, and on information and belief still has not done so today.

3.28. In 2009, France's highest court ruled that Monsanto had not told the truth about the safety of Roundup®. The French court affirmed an earlier judgment that Monsanto had falsely advertised its herbicide Roundup® as "biodegradable" and that it "left the soil clean."¹⁷

Classifications and Assessments of Glyphosate

3.29. The IARC process for the classification of glyphosate followed the stringent procedures for the evaluation of a chemical agent. Over time, the IARC Monograph program has reviewed 980 agents. Of those reviewed, it has determined 116 agents to be Group 1 (Known Human Carcinogens); 73 agents to be Group 2A (Probable Human Carcinogens); 287 agents to be Group 2B (Possible Human Carcinogens); 503 agents to be Group 3 (Not Classified); and one agent to be Probably Not Carcinogenic.

¹⁷ Monsanto Guilty in 'False Ad' Row, BBC, Oct. 15, 2009, available at <http://news.bbc.co.uk/2/hi/europe/8308903.stm>.

1 3.30. The established procedure for IARC Monograph evaluations is described in
 2 the IARC Programme's Preamble.¹⁸ Evaluations are performed by panels of international
 3 experts, selected on the basis of their expertise and the absence of actual or apparent conflicts
 4 of interest.

5 3.31. One year before the Monograph meeting, the meeting is announced and there
 6 is a call both for data and for experts. Eight months before the Monograph meeting, the
 7 Working Group membership is selected and the sections of the Monograph are developed by
 8 the Working Group members. One month prior to the Monograph meeting, the call for data is
 10 closed and the various draft sections are distributed among Working Group members for
 11 review and comment. Finally, at the Monograph meeting, the Working Group finalizes
 12 review of all literature, evaluates the evidence in each category, and completes the overall
 13 evaluation. Within two weeks after the Monograph meeting, the summary of the Working
 14 Group findings is published in *The Lancet Oncology*, and within a year after the meeting, the
 15 final Monograph is finalized and published.

17 3.32. In assessing an agent, the IARC Working Group reviews the following
 18 information: (a) human, experimental, and mechanistic data; (b) all pertinent
 19 epidemiological studies and cancer bioassays; and (c) representative mechanistic data. The
 20 studies must be publicly available and have sufficient detail for meaningful review, and
 21 reviewers cannot be associated with the underlying study.

23
 24
 25
 26

¹⁸ World Health Org., *IARC Monographs on the Evaluation of Carcinogenic Risks to Humans: Preamble* (2006),
 available at <http://monographs.iarc.fr/ENG/Preamble/CurrentPreamble.pdf>.

1 3.33. In March 2015, IARC reassessed glyphosate. The summary published in *The*
 2 *Lancet Oncology* reported that glyphosate is a Group 2A agent and probably carcinogenic in
 3 humans.

4 3.34. On July 29, 2015, IARC issued its Monograph for glyphosate in Volume 112.
 5 For the volume that assessed glyphosate, a Working Group of 17 experts from 11 countries
 6 met at IARC from March 3–10, 2015, to assess the carcinogenicity of certain herbicides,
 7 including glyphosate. The March meeting culminated nearly a one-year review and
 8 preparation by the IARC Secretariat and the Working Group, including a comprehensive
 9 review of the latest available scientific evidence. According to published procedures, the
 10 Working Group considered “reports that have been published or accepted for publication in
 11 the openly available scientific literature” as well as “data from governmental reports that are
 12 publicly available.”

15 3.35. The studies considered the following exposure groups: occupational exposure
 16 of farmers and tree nursery workers in the United States, forestry workers in Canada and
 17 Finland, and municipal weed-control workers in the United Kingdom; and para-occupational
 18 exposure in farming families.

19 3.36. Glyphosate was identified as the second-most used household herbicide in the
 20 United States for weed control between 2001 and 2007 and the most heavily used herbicide
 21 in the world in 2012.

23 3.37. Exposure pathways are identified as air (especially during spraying), water,
 24 and food. Community exposure to glyphosate is widespread and found in soil, air, surface
 25 water, and groundwater, as well as in food.

1 3.38. The assessment of the IARC Working Group identified several case control
2 studies of occupational exposure in the United States, Canada, and Sweden. These studies
3 show a human health concern from agricultural and other work-related exposure to
4 glyphosate.

5 3.39. The IARC Working Group found an increased risk between exposure to
6 glyphosate and non-Hodgkin's lymphoma ("NHL") and several subtypes of NHL, and the
7 increased risk persisted after adjustment for other pesticides.

8 3.40. The IARC Working Group also found that glyphosate caused DNA and
9 chromosomal damage in human cells. One study in community residents reported increases
10 in blood markers of chromosomal damage (micronuclei) after glyphosate formulations were
11 sprayed.

12 3.41. In male CD-1 mice, glyphosate induced a positive trend in the incidence of a
13 rare tumor, renal tubule carcinoma. A second study reported a positive trend for
14 haemangiosarcoma in male mice. Glyphosate increased pancreatic islet-cell adenoma in male
15 rats in two studies. A glyphosate formulation promoted skin tumors in an initiation-
16 promotion study in mice.

17 3.42. The IARC Working Group also noted that glyphosate has been detected in the
18 urine of agricultural workers, indicating absorption. Soil microbes degrade glyphosate to
19 aminomethylphosphoric acid (AMPA). Blood AMPA detection after exposure suggests
20 intestinal microbial metabolism in humans.

21 3.43. The IARC Working Group further found that glyphosate and glyphosate
22 formulations induced DNA and chromosomal damage in mammals, and in human and animal
23 cells in utero.

1 3.44. The IARC Working Group also noted genotoxic, hormonal, and enzymatic
 2 effects in mammals exposed to glyphosate.¹⁹ Essentially, glyphosate inhibits the biosynthesis
 3 of aromatic amino acids, which leads to several metabolic disturbances, including the
 4 inhibition of protein and secondary product biosynthesis and general metabolic disruption.

5 3.45. The IARC Working Group also reviewed an Agricultural Health Study,
 6 consisting of a prospective cohort of 57,311 licensed pesticide applicators in Iowa and North
 7 Carolina.²⁰ While this study differed from others in that it was based on a self-administered
 9 questionnaire, the results support an association between glyphosate exposure and Multiple
 10 Myeloma, Hairy Cell Leukemia (HCL), and Chronic Lymphocytic Leukemia (CLL), in
 11 addition to several other cancers.

12 **Other Earlier Findings about Glyphosate's Dangers to Human Health**

13 3.46. The EPA has a technical fact sheet, as part of its Drinking Water and Health,
 14 National Primary Drinking Water Regulations publication, relating to glyphosate. This
 15 technical fact sheet predates the IARC March 20, 2015, evaluation. The fact sheet describes
 16 the release patterns for glyphosate as follows:

18 **Release Patterns**

19 Glyphosate is released to the environment in its use as an herbicide for
 20 controlling woody and herbaceous weeds on forestry, right-of-way, cropped
 21 and non-cropped sites. These sites may be around water and in wetlands.

22 It may also be released to the environment during its manufacture,
 23 formulation, transport, storage, disposal, and cleanup, and from spills. Since

1 glyphosate is not a listed chemical in the Toxics Release Inventory, data on
 2 releases during its manufacture and handling are not available.

3 Occupational workers and home gardeners may be exposed to glyphosate by
 4 inhalation and dermal contact during spraying, mixing, and cleanup. They
 5 may also be exposed by touching soil and plants to which glyphosate was
 6 applied. Occupational exposure may also occur during glyphosate's
 7 manufacture, transport storage, and disposal.²¹

8 3.47. In 1995, the Northwest Coalition for Alternatives to Pesticides reported that in
 9 California, the state with the most comprehensive program for reporting of pesticide-caused
 10 illness, glyphosate was the third most commonly-reported cause of pesticide illness among
 11 agricultural workers.²²

12 **The Toxicity of Other Ingredients in Roundup®**

13 3.48. In addition to the toxicity of the active ingredient, glyphosate, several studies
 14 support the hypothesis that the glyphosate-based formulation in Defendant's Roundup®
 15 products is more dangerous and toxic than glyphosate alone. Indeed, as early as 1991,
 16 available evidence demonstrated that glyphosate formulations were significantly more toxic
 17 than glyphosate alone.²³

18 3.49. In 2002, a study by Julie Marc entitled "Pesticide Roundup Provokes Cell
 19 Division Dysfunction at the Level of CDK 1/ Cyclin B Activation," revealed Roundup®
 20

1 causes delays in the cell cycles of sea urchins but that the same concentrations of glyphosate
 2 alone were ineffective and did not alter cell cycles.²⁴

3 3.50. A 2004 study by Marc and others, entitled “Glyphosate-based pesticides affect
 4 cell cycle regulation,” demonstrated a molecular link between glyphosate-based products and
 5 cell cycle dysregulation. The researchers noted that “[c]ell cycle dysregulation is a hallmark
 6 of tumor cells and human cancer. Failure in the cell cycle checkpoints leads genomic
 7 instability and subsequent development of cancer from the initial affected cell.” Further,
 8 “[s]ince cell cycle disorders such as cancer result from dysfunction of a unique cell, it was of
 9 interest to evaluate the threshold dose of glyphosate affecting the cells.”²⁵

10 3.51. In 2005, a study by Francisco Peixoto, entitled “Comparative effects of the
 11 Roundup and glyphosate on mitochondrial oxidative phosphorylation,” demonstrated that
 12 Roundup®’s effects on rat liver mitochondria are far more toxic than equal concentrations of
 13 glyphosate alone. The Peixoto study further suggested that the harmful effects of Roundup®
 14 on mitochondrial bioenergetics could not be exclusively attributed to glyphosate but could be
 15 the result of result of other chemicals, such as the surfactant POEA, or the alternative, due to
 16 potential synergic effect between glyphosate and other ingredients in the Roundup®
 17 formulation.²⁶

22
 23 ²⁴ Julie Marc, et al., *Pesticide Roundup Provokes Cell Division Dysfunction at the Level of CDK1/Cyclin B Activation*, 15 CHEM. RES. TOXICOL. 326-331 (2002), available at <http://pubs.acs.org/doi/full/10.1021/tx015543g>.

24 ²⁵ Julie Marc, et al., *Glyphosate-based pesticides affect cell cycle regulation*, 96 BIOLOGY OF THE CELL 245, 245-249 (2004), available at <http://onlinelibrary.wiley.com/doi/10.1016/j.biolcel.2003.11.010/epdf>.

25 ²⁶ Francisco Peixoto, *Comparative effects of the Roundup and glyphosate on mitochondrial oxidative phosphorylation*, 61 CHEMOSPHERE 1115, 1122 (2005), available at <http://www.ask-force.org/web/Seralini/Peixoto-Comparative-Effects-RR-Glyphosate-2006.pdf>.

1 3.52. In 2009, Nora Benachour and Gilles-Eric Seralini published a study
 2 examining the effects of Roundup® and glyphosate that were far below agricultural
 3 recommendations, corresponding with low levels of residue in food. The researchers
 4 ultimately concluded that supposed “inert” ingredients, and possibly POEA, alter human cell
 5 permeability and amplify toxicity of glyphosate alone. The researchers further suggested that
 6 assessments of the glyphosate toxicity should account for the presence of adjuvants or
 7 additional chemicals used in the formulation of the complete pesticide. The study confirmed
 8 that the adjuvants present in Roundup® are not, in fact, inert and that Roundup® is potentially
 9 far more toxic than its active ingredient glyphosate alone.²⁷

10 **Recent Worldwide Bans on Roundup®/Glyphosate**

11 3.53. Several countries around the world have instituted bans on the sale of
 12 Roundup® and other glyphosate-containing herbicides, both before and since IARC first
 13 announced its assessment for glyphosate in March 2015, and more countries undoubtedly
 14 will follow suit as the dangers of the use of Roundup® are more widely known. The
 15 Netherlands issued a ban on all glyphosate-based herbicides in April 2014, including
 16 Roundup®, which took effect by the end of 2015. In issuing the ban, the Dutch Parliament
 17 member who introduced the successful legislation stated: “Agricultural pesticides in user-
 18 friendly packaging are sold in abundance to private persons. In garden centers, Roundup® is
 19 promoted as harmless, but unsuspecting customers have no idea what the risks of this product
 20 are.”

1 are. Especially children are sensitive to toxic substances and should therefore not be exposed
 2 to it.”²⁸

3 3.54. The Brazilian Public Prosecutor in the Federal District requested that the
 4 Brazilian Justice Department suspend the use of glyphosate.²⁹

5 3.55. France banned the private sale of Roundup® and glyphosate following the
 6 IARC assessment for glyphosate.³⁰

7 3.56. Bermuda banned both the private and commercial sale of glyphosates,
 8 including Roundup®. The Bermuda government explained its ban as follows: “Following a
 9 recent scientific study carried out by a leading cancer agency, the importation of weed spray
 10 ‘Roundup’ has been suspended.”³¹

11 3.57. The Sri Lankan government banned the private and commercial use of
 12 glyphosates, particularly out of concern that glyphosate has been linked to fatal kidney
 13 disease in agricultural workers.³²

1 3.58. The government of Columbia announced its ban on using Roundup® and
 2 glyphosate to destroy illegal plantations of coca, the raw ingredient for cocaine, because of
 3 the WHO's finding that glyphosate is probably carcinogenic.³³

4 **Plaintiff's Exposure to Roundup®**

5 3.59. Steven Madsen used Roundup® and Roundup PRO® primarily in the spring
 6 and for 2-4 weeks per year and for approximately eight hours at a time while employed as a
 7 maintenance worker for the City of Auburn, WA.

9 3.60. During the course and scope of his employment from approximately 1973 to
 10 2004, Mr. Madsen primarily applied Roundup® and Roundup PRO® with a 3- or 4-gallon
 11 backpack sprayer and with a tank mounted on a truck at Auburn's multiple parks and city
 12 properties.

13 3.61. In the course and scope of his job, Mr. Madsen was often and regularly
 14 exposed to Roundup® on his skin when mixing or applying Roundup® and Roundup PRO®,
 15 including on his hands and back.

17 3.62. During the course and scope of his employment, Mr. Madsen earned his
 18 license to spray from Washington State University.

19 3.63. On information and belief, Mr. Madsen attended seminars by Monsanto in the
 20 1970s – 1980s at which he was told Roundup® was safe enough to drink and there was no
 21 need to wear a mask while applying it by.

23
 24
 25
 26

³³ *Columbia to ban coca spraying herbicide glyphosate*, BBC, May 10, 2015, available at
<http://www.bbc.com/news/world-latin-america-32677411>.

3.64. Steven Madsen used Roundup® and Roundup PRO® approximately 20 years at his personal residence. Plaintiff purchased Roundup® and Roundup PRO® in its liquid form and applied it in Washington State.

3.65. Steven Madsen used Roundup® and Roundup PRO® 3-4 times a year in the in the spring, summer and fall; he sprayed in his yard for up to one hour at a time to control weeds.

3.66. Mr. Madsen's yard was approximately 0.6 acres in size. Plaintiff primarily used a backpack sprayer and was often and regularly exposed to Roundup® and Roundup PRO® on his skin, including on his hands and back.

3.67. On or around 2017, doctors diagnosed Steven Madsen with a subtype of T cell lymphoma, anaplastic large cell lymphoma, ALK positive, non-Hodgkin's lymphoma. As a result of his injury, Mr. Madsen underwent EPOCH chemotherapy and he continues to see his oncologist for regular follow-up care.

3.68. During the entire time Steven Madsen was exposed to Roundup® and Roundup PRO® during his employment and personal use, he did not know that exposure to Roundup® and Roundup PRO® was injurious to his health or the health of others.

IV. TOLLING OF THE STATUTE OF LIMITATIONS DISCOVERY RULE TOLLING

4.1. The running of any statute of limitations has been tolled by reason of Defendant's fraudulent concealment. Defendant, through its affirmative misrepresentations and omissions, actively concealed from Plaintiff the true risks associated with Roundup® and glyphosate.

4.2. At all relevant times, Defendant has maintained that Roundup® is safe, non-toxic, and non-carcinogenic.

1 4.3. Even as of July 2016, Defendant continued to represent to the public that
 2 "Regulatory authorities and independent experts around the world have reviewed numerous
 3 long-term/carcinogenicity and genotoxicity studies and agree that there is no evidence that
 4 glyphosate, the active ingredient in Roundup® brand herbicides and other glyphosate-based
 5 herbicides, causes cancer, even at very high doses, and that it is not genotoxic.³⁴
 6

7 4.4. As a result of Defendant's actions, Plaintiffs were unaware, and could not
 8 reasonably know or have learned through reasonable diligence that Roundup® and/or
 9 glyphosate contact, exposed Plaintiff Steven Madsen to the risks alleged herein and that those
 10 risks were the direct and proximate result of Defendant's acts and omissions.

11 4.5. Furthermore, Defendant is estopped from relying on any statute of limitations
 12 because of its fraudulent concealment of the true character, quality and nature of Roundup®.
 13 Defendant was under a duty to disclose the true character, quality, and nature of Roundup®
 14 because this was non-public information over which Defendant had and continues to have
 15 exclusive control, and because Defendant knew that this information was not available to
 16 Plaintiff or to distributors of Roundup®. In addition, Defendant is estopped from relying on
 17 any statute of limitations because of its intentional concealment of these facts.
 18

19 4.6. Plaintiffs had no knowledge that Defendant was engaged in the wrongdoing
 20 alleged herein. Because of the fraudulent acts of concealment of wrongdoing by Defendant,
 21 Plaintiffs could not have reasonably discovered the wrongdoing at any time prior. Also, the
 22 economics of this fraud should be considered. Defendant had the ability to and did spend
 23 enormous amounts of money in furtherance of its purpose of marketing, promoting and/or
 24

25
 26³⁴ Backgrounder – Glyphosate: No Evidence of Carcinogenicity, Updated November 2014, available at
<https://www.monsantoglobal.com/global/jp/products/Documents/no-evidence-of-carcinogenicity.pdf>.

distributing a profitable herbicide, notwithstanding the known or reasonably known risks. Plaintiffs and medical professionals could not have afforded and could not have possibly conducted studies to determine the nature, extent, and identity of related health risks, and were forced to rely on only the Defendant's representations. Accordingly, Defendant is precluded by the discovery rule and/or the doctrine of fraudulent concealment from relying upon any statute of limitations.

V. CAUSE OF ACTION

CLAIM ONE
WASHINGTON PRODUCT LIABILITY ACT

5.1. Plaintiffs hereby incorporates by reference the allegations of this Complaint contained in each of the preceding paragraphs as if fully stated herein.

5.2. At all times relevant to this litigation, Defendant engaged in the business of testing, developing, designing, manufacturing, marketing, selling, distributing, and promoting Roundup® products.

5.3. At all times relevant to this litigation, Defendant designed, researched, developed, manufactured, produced, tested, assembled, labeled, advertised, promoted, marketed, sold, and distributed the Roundup® products used by Plaintiff as described above.

5.4. At all times relevant to this litigation, Defendant's Roundup® products were expected to reach and did reach the intended consumers, handlers, and users or other persons coming into contact with these products in Washington and throughout the United States, including Mr. Madsen, without substantial change in their condition as designed, manufactured, sold, distributed, labeled, and marketed by Defendant.

5.5. In violation of the Washington Products Liability Act (“WPLA”), RCW 7.72, et seq., at all times relevant to this action, at the time Defendant’s Roundup® products left

1 control of Defendant, they were defective and not reasonably safe. These defects include,
2 but are not limited to, the following:

- 3 i. Defendant is strictly liable to Plaintiff Steven Madsen for his injuries and
4 damages because at the time of manufacture, and at the time Defendant's
5 Roundup® products left control of Defendant, the likelihood that
6 Defendant's Roundup® products would cause injury or damage similar to
7 that suffered by Plaintiff, and the seriousness of such injury or damage had
8 been known by Defendant and outweighed the burden on Defendant to
9 design a product that would have prevented Plaintiff's injuries and damages
10 and outweighed the adverse effect that an alternative design that was
11 practical and feasible would have on the usefulness of the subject product.
- 12 ii. Defendant's Roundup® products were unsafe to an extent beyond that which
13 would be contemplated by an ordinary consumer, in one or more of the
14 following particulars: exposure to Roundup® and specifically, its active
15 ingredient glyphosate, could result in cancer and other severe illnesses and
16 injuries, making Roundup® not reasonably safe when used in the way it is
17 ordinarily used and is dangerous to an extent beyond that which would be
18 contemplated by the ordinary consumer.
- 19 iii. The Roundup® products manufactured and/or supplied by Defendant were
20 defective in design in that, an alternative design and/or formulation exists
21 that would prevent severe and permanent injury. Indeed, at the time that
22 Defendant designed its Roundup® products, the state of the industry's
23

1 scientific knowledge was such that a less risky design or formulation was
2 attainable.

3 iv. The Roundup® products were not reasonably safe in design under the
4 WPLA.

5 v. The Roundup® products manufactured and/or supplied by Defendant was
6 not reasonably safe because Defendant did not provide an adequate warning
7 or instruction about the product. At the time the Roundup® products left
8 Defendant's control, they possessed dangerous characteristics, and
9 Defendant failed to use reasonable care to provide an adequate warning of
10 such characteristics and their danger to users and handlers of the product.
11 The Roundup® products are not safe and cause severe and permanent
12 injuries. The Roundup® products were not reasonably safe because the
13 warning was inadequate and Defendant could have provided adequate
14 warnings or instructions.

15 vi. The Roundup® products manufactured and/or supplied by Defendant were
16 not reasonably safe because adequate warnings or manufacturer instructions
17 were not provided after the Roundup® products were manufactured and
18 when Defendant learned of, or should have learned of, the dangers
19 connected with the Roundup® products.

20 vii. The Roundup® products manufactured and/or supplied by Defendant were
21 not reasonably safe because they did not conform to an express warranty
22 made by Defendant regarding the product's safety and fitness for use.
23 Defendant expressly warranted that the Roundup® products were safe and fit
24
25
26

1 for their intended purposes, that they were of merchantable quality, that they
 2 did not produce any dangerous side effects, that they were adequately tested,
 3 and that their Roundup® products were safe to human health and the
 4 environment, and effective, fit, and proper for their intended use. Defendant
 5 did not disclose the material risks that Defendant's Roundup® products
 6 could cause severe and permanent injury. Defendant's express warranty
 7 regarding the Roundup® products induced Plaintiff Steven Madsen to use
 8 the products, and Plaintiff's damage was proximately caused because
 9 Defendant's express warranty was untrue. The Roundup® products were not
 10 reasonably safe because of nonconformity to express warranty under the
 11 WPLA.

12
 13 5.6. As a direct and proximate result of Defendant placing its defective Roundup®
 14 products into the stream of commerce, Plaintiff Steven Madsen has suffered and continues
 15 to suffer grave injuries, and has endured physical pain and discomfort, as well as economic
 16 hardship, including considerable financial expenses for medical care and treatment. Plaintiff
 17 will continue to incur these expenses in the future.

18
 19
 20 **CLAIM TWO**
BREACH OF IMPLIED WARRANTIES

21 5.7. Plaintiffs hereby incorporate by reference the allegations of this Complaint
 22 contained in each of the preceding paragraphs as if fully stated herein.

23 5.8. At all times relevant to this litigation, Defendant engaged in the business of
 24 testing, developing, designing, manufacturing, marketing, selling, distributing, and promoting
 25 its Roundup® products, which are defective and unreasonably dangerous to consumers,

1 including Plaintiff Steven Madsen, thereby placing Roundup® products into the stream of
 2 commerce. These actions were under the ultimate control and supervision of Defendant.

3 5.9. Before the time that Plaintiff Steven Madsen was exposed to the use of the
 4 aforementioned Roundup® products, Defendant impliedly warranted to its consumers—
 5 including Plaintiff's employer—that its Roundup® products were of merchantable quality
 6 and safe and fit for the use for which they were intended; specifically, as agricultural and
 7 horticultural herbicides.

8 5.10. Defendant, however, failed to disclose that Roundup® has dangerous
 9 propensities when used as intended and that the use of and/or exposure to Roundup® and
 10 glyphosate-containing products carries an increased risk of developing severe injuries,
 11 including Plaintiff's injuries.

12 5.11. Upon information and belief, Plaintiff Steven Madsen and his employer
 13 reasonably relied upon the skill, superior knowledge and judgment of Defendant and upon
 14 its implied warranties that the Roundup® products were of merchantable quality and fit for
 15 their intended purpose or use.

16 5.12. Upon information and belief, Plaintiff Steven Madsen and his employer were
 17 at all relevant times in privity with Defendant.

18 5.13. Plaintiff Steven Madsen is the intended third-party beneficiary of implied
 19 warranties made by Defendant to the purchasers of its agricultural and horticultural
 20 herbicides, including the company that employed Plaintiff, and as such Plaintiff is entitled
 21 to assert this claim.

1 5.14. The Roundup® products were expected to reach and did in fact reach
2 consumers and users, including Plaintiff Steven Madsen, without substantial change in the
3 condition in which they were manufactured and sold by Defendant.

4 5.15. At all times relevant to this litigation, Defendant was aware that consumers
5 and users of its products, including Plaintiff Steven Madsen, would use Roundup® products
6 as marketed by Defendant, which is to say that Plaintiff was a foreseeable user of
7 Roundup®.

8 5.16. Defendant intended that its Roundup® products be used in the manner in
9 which Plaintiff Steven Madsen in fact used them and Defendant impliedly warranted each
10 product to be of merchantable quality, safe, and fit for this use, despite the fact that
11 Roundup® was not adequately tested or researched.

12 5.17. In reliance upon Defendant's implied warranty, Plaintiff Steven Madsen used
13 Roundup® as instructed and labeled and in the foreseeable manner intended, recommended,
14 promoted, and marketed by Defendants.

15 5.18. Neither Plaintiff Steven Madsen nor his employer could have reasonably
16 discovered or known of the risks of serious injury associated with Roundup® or glyphosate.

17 5.19. Defendant breached its implied warranty to Plaintiff Steven Madsen in that its
18 Roundup® products were not of merchantable quality, safe, or fit for their intended use, or
19 adequately tested. Roundup® has dangerous propensities when used as intended and can
20 cause serious injuries, including those injuries complained of herein.

21 5.20. The harm caused by Defendant's Roundup® products far outweighed their
22 benefit, rendering the products more dangerous than an ordinary consumer or user would
23 expect and more dangerous than alternative products.

5.21. As a direct and proximate result of Defendant's wrongful acts and omissions Plaintiff Steven Madsen has suffered severe and permanent physical and emotional injuries. Plaintiff has endured pain and suffering, has suffered economic loss (including significant expenses for medical care and treatment) and will continue to incur these expenses in the future.

CLAIM THREE

VIOLATION OF WASHINGTON CONSUMER PROTECTION ACT

5.22. Plaintiffs hereby incorporate by reference the allegations of this Complaint contained in each of the preceding paragraphs as if fully stated herein.

5.23. Defendant violated the Washington Consumer Protection Act (“CPA”).

5.24. Defendant engaged in unfair or deceptive acts or practices including, but not limited to, the following:

a) engaging in acts and practices by willfully failing and refusing to timely report information that reasonably suggested Roundup®, like that used by Plaintiff Steven Madsen, may cause or contribute to cause cancer and other serious illnesses;

b) representing knowingly or with reason to know that Roundup® has approval, characteristics, uses, or benefits that it does not have;

c) representing knowingly or with reason to know that Roundup® is of a particular standard, quality, or grade when it differs materially from that representation; and/or

d) representing knowingly or with reason to know that Roundup® has uses, benefits, or characteristics that have been otherwise proven incorrect;

5.25. Defendant's unfair and deceptive acts or practices described above were committed in the course of Defendant's trade or commerce.

5.26. Defendant's unfair and deceptive acts or practices described above affected public interest.

5.27. Defendant's violation of the Washington CPA, whether individually or in combination, caused Plaintiff's injuries and damages set forth herein.

VI. PUNITIVE DAMAGES

6.1. Plaintiffs incorporate herein by reference, as though fully set forth at length, each and every allegation and statement contained in the foregoing paragraphs.

6.2. Defendant is liable for punitive and/or exemplary damages under choice of law principles. Defendant acted with willful disregard of the rights of the Plaintiffs and the public. Defendant's conduct was outrageous and reckless toward the safety of the Plaintiff Steven Madsen and the public.

VII. DAMAGES

7.1. Plaintiffs incorporate herein by reference, as though fully set forth at length, each and every allegation and statement contained in the foregoing paragraphs.

7.2. As a direct and proximate result of Defendant's tortious conduct and breach of duties as set forth herein, Steven Madsen sustained serious injuries to include a subtype of T cell lymphoma called ACLC, ALK-positive.

7.3. The serious injuries sustained by Steven Madsen are painful, permanent, and disabling, and have necessitated extensive medical care and treatment in the past and will continue to necessitate extensive medical care and treatment in the future.

7.4. As a direct and proximate result of his serious injuries, Steven Madsen has sustained pain and suffering, both physical and mental, and with reasonable probability will continue to experience pain and suffering, both physical and mental, in the future.

7.5. As a further direct and proximate result of his injuries, Steven Madsen has sustained disability, and loss of enjoyment of life, and will continue to sustain disability and loss of enjoyment of life in the future.

7.6. As a further direct and proximate result of his injuries, Steven Madsen has sustained medical expenses, out of pocket expenses, and costs. With reasonable probability, he will continue to sustain medical expenses, life care expenses, and other out of pocket costs and expenses in the future as a result of his serious injuries.

7.7. As a direct and proximate result of Defendants' tortious conduct and breach of duties as set forth herein, Diana Madsen, spouse of Steven Madsen, has sustained and will continue to sustain a loss of consortium and related damages.

7.8. Plaintiffs are entitled to damages in an amount to be proved at trial, together with interest thereon and costs.

7.9. WHEREFORE, Plaintiffs pray for judgment against Defendant, and each of them, as hereinafter set forth.

VIII. PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray for judgment and relief against the Defendant as follows:

8.1. General damages, in an amount to be proven at the time of trial:

- 8.2. Special damages to be shown at the time of trial, including all pre-judgment interest allowed by law;
- 8.3. Punitive damages according to proof at the time of trial;
- 8.4. Treble damages in the maximum amounts permitted by RCW 19.86.090;
- 8.5. Costs including reasonable attorney's fees court costs and other litigation expenses; and
- 8.6. Any other further relief as the Court deems just and proper.

IX. JURY TRIAL DEMAND

Plaintiff demands a trial by jury on all of the triable issues within this Complaint.

DATED this 14th day of May, 2019.
